

AREAS OF EXPERTISE

Artificial Intelligence

Outsource your artificial intelligence design needs. We design models and algorithms tailored to your operational needs and strategic challenges.

Data science

Explore the potential of Data Science to leverage your data, increase your business, and refine your strategic approach; By entrusting us with this task, you benefit from all these advantages without the need to recruit or divert from your core activities.

Data analytics

Harness the power of data analysis with our services, providing KPIs and actionable insights. We handle all stages, from data auditing to visualization

Espificio, your partner in Data Science

Entrust us with your Data Science projects in order to leverage the intelligence within your data..

At Espificio, we support businesses and organizations in sensitive sectors such as healthcare, industry, or finance, in their projects and new uses of Deep technologies and AI.

We favor a pragmatic and sector-specific approach for conducting studies and developing solutions tailored to the sector's specificities.

Harness the full value of your data with an ethical and secure use of artificial intelligence.

Our multi-sectoral service offer :

Espificio is dedicated to providing cutting-edge Data Science solutions to meet your business needs. Our team of Data Science experts combines in-depth technical expertise with a keen understanding of business challenges. Here is an overview of our services: intellectual services firm, supporting your innovative projects in Data Science and Artificial Intelligence (AI). We provide you with our expertise and know-how to optimize the use of your data and leverage deeptech technological advancements.

Feasibility Studies, Case Analyses, and Pilot Project Design (POC):

- Close collaboration to identify needs and study feasibility.
- Implementation of tailored pilot projects assessing effectiveness and operational viability.

Data Exploration, Analysis, and Visualization:

- In-depth analysis of datasets to evaluate possibilities and limitations.
- Rigorous analysis process to ensure quality, consistency, accuracy, and integrity.
- Use of advanced machine learning or deep learning techniques to extract insights from vast and complex datasets.

Design, Modeling, and Development of AI Algorithms:

- Design of predictive and optimization models to anticipate future trends and for medical diagnosis, research, and hospital resource optimization.
- Development of custom artificial intelligence applications.
- Implementation of Computer Vision solutions for surveillance and security.

Data Science Training and Consultancy:

- Customized and personalized training sessions.
- Development of data and AI strategies tailored to your needs.
- Support in adopting a data-driven culture and AI within your organization.

Why Choose Espificio?

Innovative DeepTech Solutions:

- Constant monitoring for cutting-edge Deep Tech and AI solutions.
- Application of best Data Science practices to generate innovative and effective solutions through our multidisciplinary teams.

Tailored Support:

- A tailored approach adapted to your objectives.
- Experienced interveners in transformation, understanding the complexity of change for a smooth adoption of AI projects.

Operational and Strategic Data Approach:

- Strategic guidance throughout the process, from conceptualization to deployment, for tangible results.
- Audit, modeling, cleaning ensuring data quality and relevance.
